

KICKSTART FERTILISER

Give your lawn the best start possible. A Starter Fertiliser improves germination when sowing new lawns and oversowing existing lawn areas.

Specially formulated to ensure successful germination. It is highly recommended to apply a starter fertiliser when sowing seed. The balance of the major elements of NPK (Nitrogen, Phosphorus and Potassium) particularly Phosphorus will provide the required nutrients to enhance strong grass roots.

SIZE 2.5kg, 5kg, 20kg

Recommended Use:

Recommended to use on all lawn . seed varieties including Ryegrass, Fescue, Bluegrass, Bentgrass, Kikuyu, Couch, Buffalo and Zoysia.

How to use Starter Fertiliser when seeding:

PREPARE YOUR SOIL

Clear the area of weeds and debris. Improve drainage by digging or aerating. Level the ground. If the soil is poor quality bring in lawn soil (sandy loam) from a local soil supplier.

FERTILISE

Apply starter fertiliser to the soil (up to 48 hours before or same day as sowing) and water it in. Use Landscape Range KickStart Fertiliser at a rate of 3kg per 100m². Water well.

SPREAD SEED EVENLY

the sowing recommended on the pack. Dividing the area and the seed into the same number of parts will help you spread them evenly. Gently rake to ensure good seed to soil contact.

WATERING

For the best outcome, maintain a consistently damp seedbed for 3 to 4 weeks using a fine spray to prevent seed movement. Avoid letting it dry out as germination will slow.

Lawn Maintenance Guide:

Switch to a Maintenance Fertiliser when regular mowing commences. Fertilise twice in Autumn and twice in Spring

First mow: When well established at around 40-50mm height. Take off only the tips for the first few mows.

When fully established mow regularly and avoid removing more than one-third of the leaf at a time.

Avoid mowing during the heat of the day in summer to prevent stressing your lawn.
