

LAWN FERTILISING INSTRUCTIONS:

Follow these steps for a greener, thicker, healthier lawn.

WHY FERTILISE?

Every time you mow, your lawn loses nutrients, and rain and watering wash more away. Regular fertilising restores colour, strengthens roots, thickens your lawn so weeds have less room to grow, and helps it handle summer heat and winter cold.

WHEN TO FERTILISE

At least four times a year: twice in spring and twice in autumn, to prepare your lawn for summer and winter.

Early Spring (Sep): wakes your lawn up after winter.

Late Spring (Nov): builds strength before summer.

Early Autumn (Mar): helps it recover from summer.

Late Autumn (May): holds its colour through winter.

Warmer climates (QLD, northern NSW, NT): lawns keep growing in winter and can use extra feeds. If you're still mowing regularly, your lawn can use a feed.

HOW TO FERTILISE

1. **Start with a dry lawn.** Mow a day or two beforehand.
2. **Spread evenly** with an Earthway spreader for less risk of burning.
3. **Apply in two directions:** half up and down, half across.
4. **Sweep hard surfaces** back onto the lawn. Iron fertilisers can stain.
5. **Water in straight away** with around 4mm of water to wash granules down to the roots.
6. **Wait 24 to 48 hours** before mowing.

WHICH FERTILISER TO USE?

Fertiliser	N:P:K	Best for	Per 100m ²
All Seasons	22:5:8	Everyday feeding of established lawns (4–6 weeks)	3kg
Super Green Controlled Release	22:3:4	Steady feed for 10–12 weeks, ideal where rain or watering washes nutrients away	3kg
Nitro Green Iron Boost	20:0.85:2 + 5% iron	Extra deep green. Sweep hard surfaces, as it can stain	2.4kg
Nitro Green Iron Boost Liquid	Liquid	Rapid green-up in 5–7 days, ideal for events	200–400mls diluted
KickStart Starter	5:6:6	Sowing seed, oversowing and new instant turf	3kg

HOW MUCH DO I NEED?

Lawn size	50m ²	100m ²	200m ²	300m ²
Per feed	1.5kg	3kg	6kg	9kg
Per year	6kg	12kg	24kg	36kg

Area = length × width. At 3kg per 100m², 4 feeds a year.

GOOD TO KNOW

Summer: don't fertilise in heatwaves, over 30°C or on drought-stressed lawns. Controlled release is best.

Kids and pets: safe once watered in and dry. Check the SDS on each product page.

"Feed your lawn four times a year and see the difference."
